From the Director's Desk

The University's research is to be a driver of new discoveries to facilitate economic progress for our state and nation. Increasing emphasis on commercializing SUBR discoveries to bring them into the public domain will be an integral component of our mission. The research activities of our faculty lead to an extraordinary enrichment of the experience of our students that is realized at both the graduate and undergraduate levels. The research training provided to our graduate students creates the next generation of scholars well-prepared to advance knowledge and discovery.

SUBR researchers are making discoveries that address society's critical issues, including identifying new and renewable energy sources, overcoming disease and maximizing health and well-being, and creating global economies that erase poverty and provide an enhanced quality of life. Their stellar accomplishments expand the frontiers of knowledge and scholarship every day.

To continue SUBR progress toward achieving research eminence and bringing the full power of our intellectual capital to achieve a vision for society's future will require strong support from university leadership. We must advance the university's research agenda, invest in promising new initiatives, optimize research support services, and enhance our commercialization potential.
